Your Experience at a Glance

We're hiring a **AI Architect** for our client (**Code Name:KPIP**) - KPIP is a global consulting and technology services firm specializing in data, analytics, and digital transformation solutions.

As an AI Architect at KPIP, you will play a pivotal role in designing and implementing advanced data and analytics solutions, leveraging modern frameworks and programming languages to drive business insights. You will collaborate with cross-functional teams to modernize data ecosystems, ensuring robust, scalable, and high-performance architectures. This role requires strong technical ownership, hands-on development, and a focus on delivering impactful solutions that support KPIP's digital transformation initiatives.

About the Client (CODE: KPIP)

KPIP operates in the consulting and technology services industry, delivering data, analytics, and digital transformation solutions to organizations worldwide. The company is committed to enabling clients to modernize their data ecosystems and unlock actionable business insights. With a focus on innovation, KPIP fosters a collaborative and growth-oriented culture, supporting clients across diverse industries in their digital journeys.

Key Responsibilities

- Design and implement advanced data and analytics architectures to support business transformation initiatives.
 - Develop solutions using the DBX Native Agent framework and modern programming languages.
 - Collaborate with cross-functional teams to deliver scalable and high-performance data solutions.
 - Drive modernization of data ecosystems to enable actionable business insights.
 - Ensure best practices in software engineering and solution delivery.
 - Contribute to the continuous improvement of data and analytics platforms.
 - Participate in technical discussions and provide architectural guidance.
 - Support the integration of new technologies and frameworks as needed.
-

Required Skills

- Hands-on experience with the DBX Native Agent framework.
 - Proficiency in Python, Java, or C++ programming languages.
 - Strong understanding of data and analytics solution design.
 - Ability to collaborate effectively with cross-functional teams.
 - Experience in implementing scalable and robust architectures.
 - Commitment to engineering best practices and high-quality code delivery.
 - Strong problem-solving and analytical skills.
 - Excellent communication and technical documentation abilities.
-

Nice to Have

- Experience with machine learning algorithms and neural networks.
 - Knowledge of natural language processing techniques.
 - Familiarity with cloud computing platforms.
 - Understanding of distributed systems.
 - Exposure to emerging AI technologies.
 - Ability to quickly learn and adapt to new tools and frameworks.
-

Why Join KPIP (Code Name)

Join KPIP to work on impactful data and analytics projects that drive digital transformation for global clients. Tackle complex technical challenges alongside talented professionals in a collaborative and innovative environment. Benefit from continuous learning opportunities, exposure to cutting-edge technologies, and a culture that values growth, ownership, and excellence.

About the Employment Model

Direct Hire (Client Payroll) : For this role, you'll be hired directly by the client and be part of their internal team. Straatix supports the hiring process, but your employment, payroll, and benefits are all managed by the client.
